WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

A closed low pressure area will remain off the California coast through today while high pressure sits over the Great Basin. The pattern of scattered to numerous showers and wet thunderstorms will continue today across the north and east.

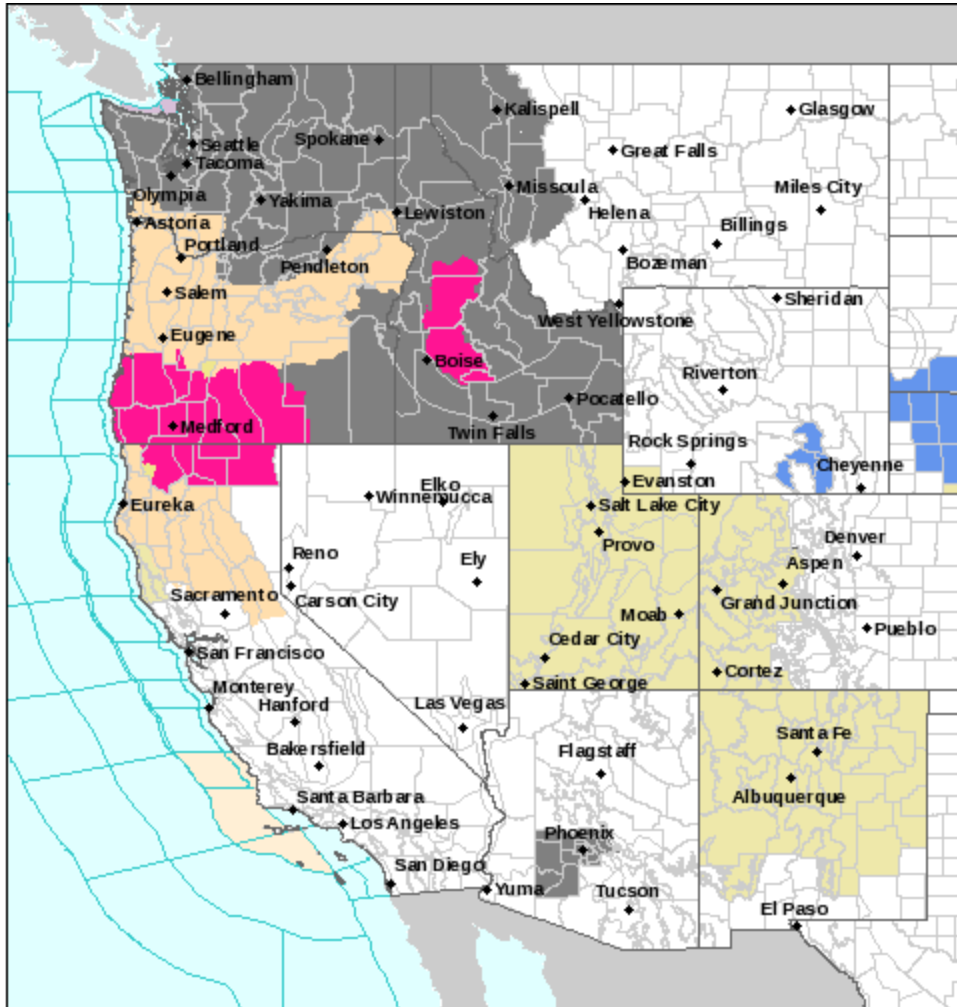

Scattered showers and thunderstorms tomorrow and on Friday will produce enough rainfall to no longer be considered a high risk situation. Nocturnal thunderstorms are possible each night this week. Today temperatures will be near normal and humidity will have climbed significantly in most areas. Southeast-Southwest winds will gust to 25-30 mph in many areas today through Friday. At this point the weekend looks dry and a bit warmer, but more thunderstorms are possible early next week.

SOUTHERN CALIFORNIA

Humid conditions will be found over many areas of the region below 3,000 feet for the next several days due to lingering low level moisture from Lidia. Afternoon temperatures are expected to range from the 70s at the coast to the upper 80s to lower 90s in the valleys to 108 in the low desert today. Scattered afternoon wet thunderstorms will develop along the Sierras north of Kern County eastward into Mono County and the Inyo National Forest. Today and tomorrow a low level flow will turn a bit more southerly which may import some monsoonal moisture into Southern California, and as a result, isolated wet thunderstorms will be possible on the San Bernardino and Cleveland National Forest. Further north, look for decreasing thunderstorm activity through the week as a trough approaches from the west. Only a handful of storms are expected in the Sierras by today and tomorrow. However, over the region, storms will become more numerous over the weekend, especially in the desert areas. Temperatures will climb a bit later this week with widespread 90s returning to the valleys, but a return of the extreme heat of last week is not expected through the period. Winds will remain light, except during the passage of thunderstorms.
